

Day 3 Lab Assignment: Linux Basics for Pen testers

Course: Web Penetration Testing Training for Beginners

Instructor: Abdullah Ismail

Deadline: 11/July/2026

Objective: Practice Linux navigation, file management, networking commands, permissions, and basic Bash scripting.

Tasks:

Task 1: Basic Linux Navigation

Run the following commands and capture screenshots:

pwd, ls, ls -la, cd /home, pwd, cd ~, pwd

Task 2: Create Directories

Create the following directory structure:

PentestLab/

├─ Recon/

├─ Reports/

├─ Scripts/

├─ Notes/

├─ Logs/

└─ Screenshots/

Use the following command:

- `mkdir -p ~/PentestLab/{Recon,Reports,Scripts,Notes,Logs,Screenshots}`
- `tree ~/PentestLab`

Task 3: Create Files

Create the following files:

- touch ~/PentestLab/Recon/targets.txt
- touch ~/PentestLab/Reports/report.txt
- touch ~/PentestLab/Scripts/recon.sh
- touch ~/PentestLab/Notes/day3_notes.txt
- touch ~/PentestLab/Logs/system.log

Verify:

- tree ~/PentestLab

Task 4: Copy, Move, Rename & Delete Files

Perform the following operations:

- cp ~/PentestLab/Reports/report.txt ~/PentestLab/Reports/report_backup.txt
- mv ~/PentestLab/Reports/report_backup.txt ~/PentestLab/Reports/final_report.txt
- mv ~/PentestLab/Logs/system.log ~/PentestLab/Reports/
- rm ~/PentestLab/Reports/report.txt
- ls -la ~/PentestLab/Reports

Task 5: Search Files

Find all PHP files inside /var/www:

- find /var/www -name "*.php"
- Save the output:
- find /var/www -name "*.php" > php_files.txt
- Find all configuration files:
- find /etc -name "*.conf"

Task 6: Read and Search Files

Display the contents of /etc/passwd:

- cat /etc/passwd

Extract usernames:

- cat /etc/passwd | cut -d: -f1

Search for the word root:

- grep root /etc/passwd
- Search recursively for password:
- grep -r "password" /var/www 2>/dev/null

Task 7: Networking Commands

Run the following commands:

- ip addr
- ip route

Test connectivity:

- ping -c 4 google.com

Display HTTP headers:

- curl -I google.com
- curl -I github.com
- curl -I openai.com

Task 9: File Permissions

Create a Bash script:

nano hello.sh

Add:

- #!/bin/bash
- echo "Welcome to Kali Linux"
- Make it executable:
- chmod +x hello.sh
- Run the script:
- ./hello.sh
- Check permissions:
- ls -l hello.sh

Submission Requirements:

Submit one PDF containing screenshots of all commands and outputs, the source code of hello.sh and recon.sh, brief explanations for each task, and your Name, Registration Number, and Submission Date.
